DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed July 22, 2004 have been acknowledged.
2. The objection to the abstract is withdrawn due to applicant's submission of an amended abstract.
3. The rejection of claims 129-176 under 35 U.S.C. 102(e) as being anticipated by Li et al., U.S. Patent Number 6,372,154 is withdrawn due to applicant's argument.
4. The rejection of claims 129-138, 141, 144-146, 149, 152-154, 157, 160-162, 165 and 168-176 under 35 U.S.C. 102(e) as being anticipated by Kwong et al., U. S. Pre Grant Publication 2002/0074935 is withdrawn due to applicant's argument.

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

Art Unit: 1774

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 129-176 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 78-113 of copending Application No. 10/026064. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications recite a light emitting device comprising an anode; a cathode; an organic compound layer provided between the anode and the cathode wherein the organic compound layer comprises a hole transporting layer and electron transporting; a mixed region disposed between the hole transporting layer and the electron transporting layer wherein the mixed region is an organic luminescent material doped to present luminescence in a triplet state and has a thickness of 10 nm or more and 100 nm or less. Additionally, both applications recite that the luminescent device is an electric appliance selected from the group consisting of a display device, a video camera, a digital camera, an image-reproducing device, a mobile portable computer, a personal computer, a cellular phone, and an audio. The reference application does not specifically recite that the mixed region is the intermediate region as in the present claims. Both applications recite a region of luminescent material that is doped with a material that presents luminescence in a triplet excite state.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

7. Applicant's arguments with respect to claims 129-176 have been considered but are moot in view of the new ground(s) of rejection.
